# Calculation policy: Subtraction

Key language: take away, less than, the difference, subtract, minus, fewer, decrease.

Suggested year group	Concrete	Pictorial	Abstract				
EYFS/Y1	<p><b>Physically taking away and removing objects from a whole</b> (ten frames, Numicon, cubes and other items such as beanbags could be used).</p> <p><math>4 - 3 = 1</math></p> 	<p>Children to draw the concrete resources they are using and cross out the correct amount. The bar model can also be used.</p> 	<p><math>4 - 3 =</math></p> <p> <math>= 4 - 3</math></p> <table border="1" data-bbox="1675 579 1984 655"> <tr> <td colspan="2">4</td> </tr> <tr> <td>3</td> <td>?</td> </tr> </table> 	4		3	?
4							
3	?						
EYFS/Y1	<p><b>Counting back</b> (using number lines or number tracks) children start with 6 and count back 2.</p> <p><math>6 - 2 = 4</math></p> 	<p>Children to represent what they see pictorially e.g.</p> 	<p>Children to represent the calculation on a number line or number track and show their jumps. Encourage children to use an empty number line</p> 				

Y1/Y2

**Finding the difference** (using cubes, Numicon or Cuisenaire rods, other objects can also be used).

Calculate the difference between 8 and 5.

Children to draw the cubes/other concrete objects which they have used or use the bar model to illustrate what they need to calculate.

Find the difference between 8 and

5.  $8 - 5$ , the difference is

Children to explore why  $9 - 6 = 8 - 5 = 7 - 4$  have the same difference.

Y1/Y2

**Making 10** using ten frames (or numicon).  
 $14 - 5$

Children to present the ten frame pictorially and discuss what they did to make 10.

Children to show how they can make 10 by partitioning the subtrahend.

$$14 - 5 = 9$$

$$\begin{array}{c} 4 \\ \swarrow \quad \searrow \\ 1 \quad 1 \end{array}$$

$$14 - 4 = 10$$

$$10 - 1 = 9$$

Y2

**Column method** using base  
10.  $48 - 7$

Children to represent the base 10 pictorially.

Column method or children could count back 7.

	4	8
-		7
	4	1

**Y2/3** **Column method** using base 10 and having to exchange.  $41 - 26$

Represent the base 10 pictorially, remembering to show the exchange.

Formal column method. Children must understand that when they have exchanged the 10 they still have 41 because  $41 = 30 + 11$ .

	3	4	1
-	2	6	
	1	5	

**Y3** **Column method** using place value counters.  $234 - 88$

Represent the place value counters pictorially; remembering to show what has been exchanged.

Formal column method. Children must understand what has happened when they have crossed out digits.

<p>Y3</p>	<p><b>Formal column method</b> with place value counters or base 10 (at the first stage- no exchanging) <math>3 \times 23</math></p> <table border="1" data-bbox="257 1173 582 1412"> <thead> <tr> <th>10s</th> <th>1s</th> </tr> </thead> <tbody> <tr> <td>  </td> <td>  </td> </tr> <tr> <td>6</td> <td>9</td> </tr> </tbody> </table>	10s	1s			6	9	<p>Children to represent the counters pictorially.</p> 	<p>Children to record what it is they are doing to show understanding.</p> <p><math>3 \times 23</math>      <math>3 \times 20 = 60</math>  <math>3 \times 3 = 9</math>  <math>60 + 9 = 69</math></p> <p> <math display="block">\begin{array}{r} 23 \\ \times 3 \\ \hline 69 \end{array}</math> </p>
10s	1s								
									
6	9								

Y3/4

**Formal column method** with place value counters (children need this stage initially, to understand how the column method works)).  
 $6 \times 23$

Children to represent the counters/base 10, pictorially e.g. the image below.

Formal written method. The aim is to get children to the formal written method but the children need to understand how it works.

$$6 \times 23 =$$

$$\begin{array}{r} 23 \\ \times 6 \\ \hline 138 \\ \hline 11 \end{array}$$

When children start to multiply  $3d \times 3d$  and  $4d \times 2d$  etc., they should be confident with the abstract:

To get 744 children have solved  $6 \times 124$ .  
 To get 2480 they have solved  $20 \times 124$ .

$$\begin{array}{r} 124 \\ \times 26 \\ \hline 744 \\ \phantom{7}480 \\ \hline 3224 \\ \phantom{3}11 \end{array}$$

Answer: 3224

## Conceptual variation; different ways to ask children to solve $6 \times 23$

?

Mai had to swim 23 lengths, 6 times a week.  
 How many lengths did she swim in one week?

With the counters, prove that  $6 \times 23 = 138$

Find the product of 6 and 23

$$6 \times 23 =$$

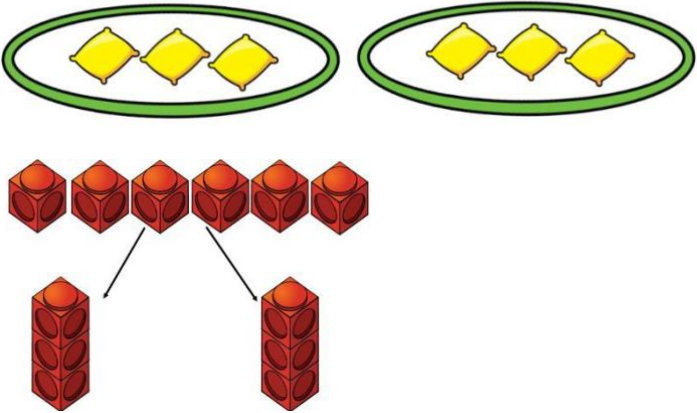

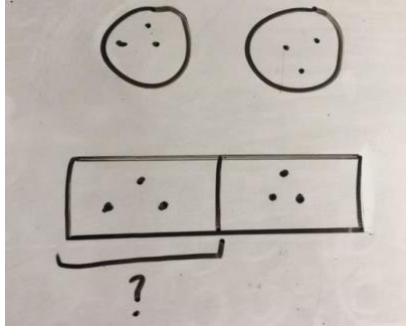

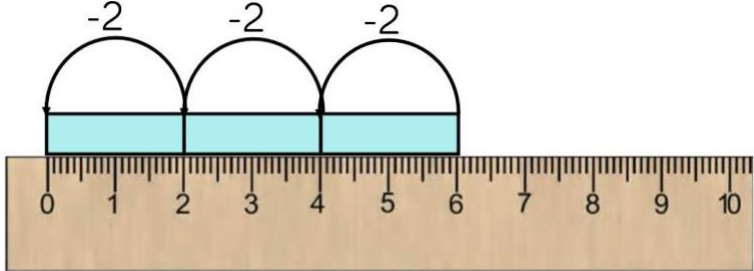

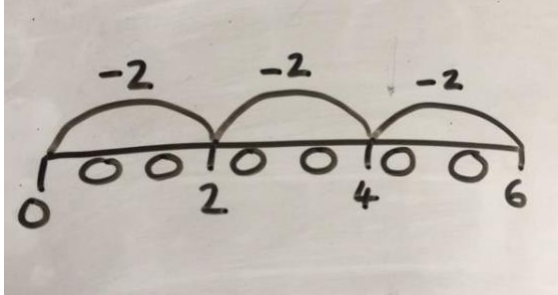

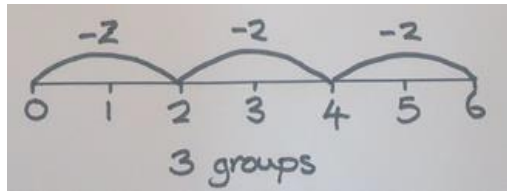

$$? = 6 \times 23$$

$$\begin{array}{r} 23 \\ \times 6 \\ \hline \end{array}$$

What is the calculation? What is the product?

Key language: share, group, divide, divided by, half, 'is equal to' 'is the same as'

Suggested year group	Concrete	Pictorial	Abstract		
EY/Y1	<p><b>Sharing</b> using a range of objects. <math>6 \div 2</math> e.g. children and hoops, teddy bears, cakes and plates etc.)</p> 	<p>Represent the sharing pictorially.</p>  <p>By using a bar all 4 operations can have a similar structure</p>	<p><math>6 \div 2 = 3</math></p> <table border="1" data-bbox="1666 507 2119 576"> <tr> <td>3</td> <td>3</td> </tr> </table> <p>Children should also be encouraged to use their 2 times tables facts.</p>	3	3
3	3				
Y2	<p><b>Repeated subtraction.</b> <math>6 \div 2</math></p>  <p>3 groups of 2</p>	<p>Children to represent repeated subtraction pictorially.</p> 	<p>Abstract number line to represent the equal groups that have been subtracted.</p> 		

Y3

**2d ÷ 1d with remainders** using lollipop sticks.

$13 \div 4$

Use of lollipop sticks to form wholes- squares are made because we are dividing by 4.

There are 3 whole squares, with 1 left over.

Children to represent the lollipop sticks pictorially.

There are 3 whole squares, with 1 left over.

$13 \div 4 = 3 \text{ remainder } 1$

Children should be encouraged to use their times table facts; they could also represent repeated addition on a number line.

'3 groups of 4, with 1 left over'

Y3/4

**Sharing using place value counters.**  $42 \div 3 = 14$

Children to represent the place value counters pictorially.

Children to be able to make sense of the place value counters and write calculations to show the process.

$42 \div 3$   
 $42 = 30 + 12$   
 $30 \div 3 = 10$   
 $12 \div 3 = 4$   
 $10 + 4 = 14$

Y4/Y5

**Short division, leading to the bus stop method** using place value counters to group. Key language for grouping – how many groups of x can we make with x hundreds.

$$615 \div 5$$

1. Make 615 with place value counters.
  2. How many groups of 5 hundreds can you make with 6 hundred counters?
  3. Exchange 1 hundred for 10 tens.
  4. How many groups of 5 tens can you make with 11 ten counters?
  5. Exchange 1 ten for 10 ones.
- How many groups of 5 ones can you make with 15 ones?

Represent the place value counters pictorially until the children no longer need to do it. It can also be done to decimal places if you have a remainder.

Children to the calculation using the short division scaffold.

$$\begin{array}{r}
 123 \\
 5 \overline{) 615} \\
 \underline{5} \phantom{0} \\
 11 \phantom{0} \\
 \underline{10} \phantom{0} \\
 15 \\
 \underline{15} \\
 0
 \end{array}$$

Y6

**Long division** using place value counters  $2544 \div 12$

We can't group 2 thousands into groups of 12 so will exchange them.

We can group 24 hundreds into groups of 12 which leaves with 1 hundred.

$$\begin{array}{r}
 02 \\
 \hline
 12 \overline{) 2544} \\
 \underline{24} \\
 1
 \end{array}$$

After exchanging the hundred, we have 14 tens. We can group 12 tens into a group of 12, which leaves 2 tens.

$$\begin{array}{r}
 021 \\
 \hline
 12 \overline{) 2544} \\
 \underline{24} \\
 14 \\
 \underline{12} \\
 2
 \end{array}$$

After exchanging the 2 tens, we have 24 ones. We can group 24 ones into 2 group of 12, which leaves no remainder.

$$\begin{array}{r}
 0212 \\
 \hline
 12 \overline{) 2544} \\
 \underline{24} \\
 14 \\
 \underline{12} \\
 24 \\
 \underline{24} \\
 0
 \end{array}$$

# Conceptual Variations; different ways to ask children to solve $615 \div 5$

Using the part whole model below, how can you divide 615 by 5 without using short division?

I have £615 and share it equally between 5 bank accounts. How much will be in each account?

615 pupils need to be put into 5 groups. How many will be in each group?

$$5 \overline{)615}$$

$$615 \div 5 =$$

$$? = 615 \div 5$$

What is the calculation?  
What is the answer?

100s	10s	1s
